1. ABOUT AXY NETWORK AND AXY CENTRAL

AXY Network is a technology and project network that is growing into a connected ecosystem. The aim is a place where people can create, code, host, play, communicate, discover, share, and collaborate.

One AXY account will work across AXY Network projects and services, so you do not need to create a new account for every project. **AXY Central** is the hub that makes this possible.

This report explains what AXY Network is, what you can use today, and what is planned. Anything that is not working yet is labeled as such.

What is AXY Central

AXY Central is the main platform you use to sign in, manage your account, and reach AXY Network services. It is live at `https://axynetwork.com`.

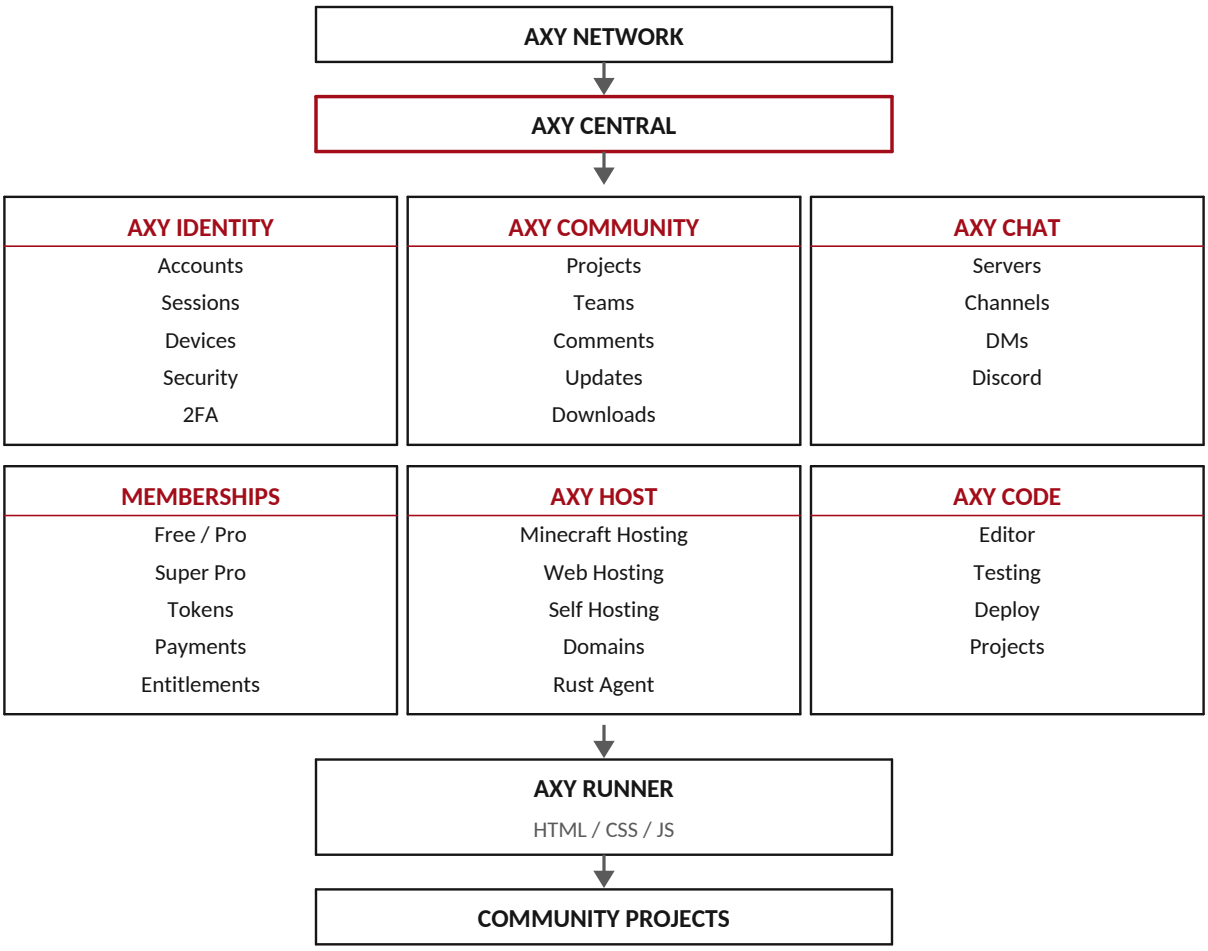

It is being built as a foundation, not just a website: a modular hub that future AXY Network projects can connect to, using the same account.

AXY Central is designed to bring together:

- **Identity:** your AXY account, sessions, linked devices, and two-factor security
- **Community:** projects, teams, comments, updates, and downloads
- **AXY Chat:** servers, channels, direct messages, and Discord integration
- **Memberships:** Free, AXY Pro, and Super AXY Pro
- **AXY Host:** Minecraft hosting, web hosting, self-hosting, and domains
- **AXY Code and AXY Runner:** coding, testing, and sharing projects

2. STATUS AT A GLANCE

Every feature on AXY Central is either working or clearly labeled Coming Soon. This is where things stand today.

Feature	Status	What it means
AXY accounts (sign up and sign in)	Live	Create an account and sign in at axynetwork.com.
Two-factor authentication	Partly live	Two-factor checks work for accounts that have it enabled. The self-service setup page is coming.
Account settings pages	Planned next	Password change, session and device management pages are being planned.
Sign in with AXY	Partly live	Projects can use AXY sign-in through the developer interface. A page for registering apps is coming.
Self-hosted Minecraft servers	Early access	Manage servers on your own computer from the AXY dashboard using the AXY Host Agent.
AXY Chat	Coming soon	Placeholder page only.
AXY Code	Coming soon	Placeholder page only.
AXY Runner	Coming soon	Placeholder page only.
Project directory and community projects	Planned	Not started yet.
Discord linking and chat bridge	Planned	You can join the community Discord today with the invite link.
Memberships, tokens, and payments	Planned	Not available yet. No purchases are possible at this time.
Cloud Minecraft hosting	In development	Pending funding.
Web hosting for your projects	Planned	Static websites first (HTML, CSS, JavaScript).
Legal pages (privacy, terms, guidelines)	Draft	Placeholders for now. Final versions are planned before any wider launch.

3. WHAT YOU CAN DO TODAY

Today you can:

- Create an AXY account with a username, display name, and email, then sign in and out at `https://axynetwork.com`.
- Use two-factor sign-in on accounts that have it enabled.
- Run Minecraft servers on your own computer and control them (create, start, stop, restart, view logs, and see CPU and RAM use) from the AXY dashboard.
- If you build projects, let people sign in to your app with their AXY account.
- Browse the home page, use the search (Ctrl K), and join the community on Discord.

Not available yet: AXY Chat, the code editor, AXY Runner, the community project directory, Discord account linking and the chat bridge, memberships and payments, account settings pages, cloud Minecraft hosting, and web hosting for your projects.

4. YOUR ACCOUNT AND SECURITY

Your AXY account is the key to everything on AXY Network, so protecting it is a core part of the design.

- **Two-factor authentication (2FA):** accounts can use an authenticator app. When 2FA is on, sensitive actions (such as managing servers or linking a device) require your 2FA code.
- **Your password stays with AXY.** Projects that offer "Sign in with AXY" never receive your password.
- **Account status:** accounts have a status (active, restricted, suspended, or disabled) so that accounts that break the rules can be limited.
- **Careful messages:** sign-in and password recovery messages are intentionally generic, so they do not reveal whether an email address has an account.

Good to know

- For now you need to sign in again after about an hour.
- Password reset and password change pages are still being built.

5. SIGN IN WITH AXY

"Sign in with AXY" lets a project use AXY Central to sign people in, so users do not need yet another account.

How it works:

1. A project sends you to AXY Central.
2. AXY Central signs you in, and asks for your 2FA code if your account uses it.
3. AXY Central sends an authorization result back to the approved project.

Your password is never shared with the project.

For creators: apps are registered with a name and secure (https) redirect addresses, and receive a client ID and a client secret that is shown only once. Registration works through the developer interface today. A web page for registering apps is planned.

6. SELF-HOSTED MINECRAFT SERVERS

You can host Minecraft servers on your own computer and manage them from the AXY dashboard. This is available as an early access feature.

The **AXY Host Agent** is a small program that runs on your computer and connects it to AXY Central. Self-hosting never starts automatically: you choose to install it, approve what it does, and link your device.

Getting started

1. Sign in and complete 2FA if your account uses it.
2. Request a 6 digit link code from AXY Central (it is valid for 5 minutes).
3. Start the AXY Host Agent on your computer and enter the code to link the device.
4. On the dashboard, create a server by choosing a name, your device, a Minecraft version, and the amount of RAM.
5. The agent sets the server up within about 15 seconds. Then you can start it.

From the dashboard

- Create, start, stop, and restart servers
- View console logs
- See CPU and RAM use

Things to know

- The agent connects out to AXY Central, so it does not need to accept incoming connections from the internet.
- Your computer needs a recent Java (current Minecraft 26.x releases need Java 25).
- Friends outside your home network can only join if your router forwards the server port to your computer. That is part of your own network setup.
- This is an early release. The agent currently runs from a terminal window rather than as a background service.
- If you close the agent, servers that are already running keep running but cannot be controlled until it is paired and started again. Stop your servers from the dashboard first.
- If a device is revoked, the agent asks you to pair it again.

7. MEMBERSHIPS AND PLANS (PLANNED)

> **Planned, not yet available.** Memberships, tokens, and payments are not live. No purchases are possible at this time. The details below describe the plan and may change.

Level	What it is	Planned benefits
FREE	The normal free account.	Core access with lower usage and deliberately limited resources.
AXY PRO	A membership tied to a specific AXY project or service.	Higher usage, more features, higher hosting limits, more customization, additional storage, and downloads where supported.
SUPER AXY PRO	The universal AXY Network membership.	Pro-level access across participating AXY projects, much higher usage and limits, additional customization and network features, and 10% discounts on eligible purchases.

Planned self-hosted Minecraft server limits:

Level	Server limit
FREE	Maximum 2 servers
AXY PRO	Maximum 10 servers
SUPER AXY PRO	Unlimited servers

"Unlimited" is subject to the capabilities of your own computer and to abuse and resource restrictions.

Planned Minecraft server addresses:

- **Free:** a supported third-party tunnel or domain solution where appropriate (the provider is still to be decided).
- **AXY Pro:** a generated AXY address, for example `the-best-server.axynetwork.net`.
- **Super AXY Pro:** pick your own available name, for example `yourpickedname.axynetwork.net`, subject to availability and naming rules.

8. WHAT IS COMING NEXT

Next: finishing accounts

- An account settings page with 2FA setup, password change, and session and device management
- Password reset pages
- A page for registering apps that use Sign in with AXY

Then: community

- **AXY Chat:** servers, channels, roles, text and direct messages, group messages, notifications, moderation, and attachments
- **Project directory and community projects:** create and share websites, games, tools, bots, experiments, and educational projects, with Public, Unlisted, and Private visibility, comments, updates, downloads, and forking with proper credit
- **Discord:** link your Discord account, plus an official bot that bridges chosen AXY Chat channels with chosen Discord channels

Later

- **Memberships and payments** (see the section on memberships and plans)
- **AXY Code:** a coding environment with a file explorer, multiple files, syntax highlighting, preview, testing, and deployment
- **AXY Runner:** a simple HTML, CSS, and JavaScript playground with live preview, save, share, and fork
- **Web hosting** for your projects, starting with static websites
- **Cloud Minecraft hosting**, in development and pending funding

We are not promising dates. Plans and priorities may change as the project grows.

9. OUR PROMISES

- **Honest status.** Every feature is either working or clearly labeled Coming Soon. We do not show made-up data as if it were real.
- **One account.** Use AXY Network projects without handing your password to each one.
- **Security first.** Sign-ins, uploads, payments, hosting, and code are treated as untrusted and designed with security in mind from the start.
- **You choose.** Self-hosting never starts on its own. You decide what to install, approve, and link.

10. COMMUNITY AND LINKS

Website: `https://axynetwork.com`

Discord: join the community at `https://discord.gg/BXjHmk2GHX`

AXY Network domains:

Domain	Used for
`axynetwork.com`	Primary AXY Network services
`axynetwork.net`	Minecraft and gaming-related services
`axynetwork.org`	Other projects and services

AXY Network names:

Name	What it is
AXY NETWORK	The overall network of projects and services
AXY CENTRAL	The central platform for accounts and services
AXY CHAT	Communication (coming soon)
AXY HOST	Minecraft and web hosting
AXY CODE	Coding environment (coming soon)
AXY RUNNER	HTML, CSS, and JavaScript playground (coming soon)
AXY PRO / SUPER AXY PRO	Planned membership levels

11. IMPORTANT NOTES

- Memberships, tokens, and payments are not live, and no purchases are possible yet.
- The privacy, terms, guidelines, acceptable use, and support pages are placeholders. Final versions are planned before any wider launch.
- AXY Central is in active development. Features may change, and some planned features may take longer than expected.
- This report describes plans for information only. It is not a promise of specific features or dates.
